

What could happen if you leave your primary home unoccupied for a long period of time?

When the pandemic first started, Patrick and Alex decided to temporarily leave their city home for the open spaces of their lake house, with a plan to return in a few months.

Risk

Patrick and Alex left their primary home unoccupied for a long period of time, but didn't shut off the water main or install a water leak detection device.

Loss

While they were away, a water leak started in the second-floor bathroom. Their cleaning person came by 8 days after they had departed and noticed the water on the floor. But by then, the leak had caused \$150,000 in damage.

Solution

Shut off your water supply before you leave your home for an extended time, or install a water shut off valve that will automatically turn the water off if there's a leak. For additional tips to keep your home safe while you're away, [check out our guide to departing your home worry free.](#)

The Chubb Difference: Protection and a discount

To help protect your home from water damage, consider installing a water leak detection device on your water supply line. Contact your agent for more information on vendors who can provide this service at a discount for Chubb homeowners clients and to learn about premium discounts that may be available on your Chubb homeowners policy.

At Chubb, we look for ways to help you prevent issues from happening in the first place. That's why we recommend installing a flow-based water leak detection device, to help keep potential water leaks from damaging your home or possessions.

How does a water shut-off device work?

Installed by a plumber directly onto your water line, a flow-based water leak detection device monitors the flow of water throughout your home and alerts you then shuts off your water supply if a leak is detected.

We've done the legwork for you.

Chubb has researched and vetted water shut-off device vendors who can help you protect your home from water leaks and has negotiated a discount for Chubb clients on these devices.

1 in 5

homeowners view internal water damage as the top risk to their home while they're away.

91%

of homeowners say they are vigilant or do an okay job at preventive home maintenance.

Just 22%

shut off their water main before heading out of town.
